# CGPDFDocument Reference

---

<b>Derived From:</b>	CType
<b>Framework:</b>	ApplicationServices/ApplicationServices.h
<b>Companion guide</b>	Quartz 2D Programming Guide
<b>Declared in</b>	CGPDFDocument.h

## Overview

The `CGPDFDocumentRef` opaque type encapsulates a document that contains PDF (Portable Document Format) drawing information. PDF provides an efficient format for cross-platform exchange of documents with rich content. PDF files can contain multiple pages of images and text. A PDF document object contains all the information relating to a PDF document, including its catalog and contents.

Note that PDF documents may be encrypted, and that some operations may be restricted until a valid password is supplied—see the functions listed in [“Managing Encryption”](#) (page 6). Quartz also supports decrypting encrypted documents.

Quartz can both display and generate files that are compliant with the PDF standard. When imaging PDF files, `CGPDFDocumentRef` is the basic type used to represent a PDF document.

## Functions by Task

### Creating PDF Document Objects

[CGPDFDocumentCreateWithProvider](#) (page 8)

Creates a Quartz PDF document using a data provider.

[CGPDFDocumentCreateWithURL](#) (page 8)

Creates a Quartz PDF document using data specified by a URL.

### Retaining and Releasing PDF Documents

[CGPDFDocumentRelease](#) (page 13)

Decrements the retain count of a PDF document.

[CGPDFDocumentRetain](#) (page 13)

Increments the retain count of a Quartz PDF document.

## Getting the CType ID for a PDF Document Object

[CGPDFDocumentGetTypeID](#) (page 11)

Returns the type identifier for Quartz PDF documents.

## Getting Information About Quartz PDF Documents

[CGPDFDocumentGetCatalog](#) (page 9)

Returns the document catalog of a Quartz PDF document.

[CGPDFDocumentGetNumberOfPages](#) (page 10)

Returns the number of pages in a PDF document.

[CGPDFDocumentGetPage](#) (page 11)

Returns a page from a Quartz PDF document.

[CGPDFDocumentGetVersion](#) (page 11)

Returns the major and minor version numbers of a Quartz PDF document.

[CGPDFDocumentGetInfo](#) (page 10)

Gets the information dictionary for a PDF document.

[CGPDFDocumentGetID](#) (page 9)

Gets the file identifier for a PDF document.

## Managing Encryption

[CGPDFDocumentAllowsCopying](#) (page 7)

Returns whether the specified PDF document allows copying.

[CGPDFDocumentAllowsPrinting](#) (page 7)

Returns whether a PDF document allows printing.

[CGPDFDocumentIsEncrypted](#) (page 12)

Returns whether the specified PDF file is encrypted.

[CGPDFDocumentIsUnlocked](#) (page 12)

Returns whether the specified PDF document is currently unlocked.

[CGPDFDocumentUnlockWithPassword](#) (page 14)

Unlocks an encrypted PDF document, if a valid password is supplied.

## Getting Page Information

[CGPDFDocumentGetArtBox](#) (page 17) **Deprecated in Mac OS X version 10.3 and later**

Returns the art box of a page in a PDF document.

[CGPDFDocumentGetBleedBox](#) (page 17) **Deprecated in Mac OS X version 10.3 and later**

Returns the bleed box of a page in a PDF document.

[CGPDFDocumentGetCropBox](#) (page 18) **Deprecated in Mac OS X version 10.3 and later**

Returns the crop box of a page in a PDF document.

[CGPDFDocumentGetMediaBox](#) (page 19) **Deprecated in Mac OS X version 10.3 and later**

Returns the media box of a page in a PDF document.

`CGPDFDocumentGetRotationAngle` (page 19) **Deprecated in Mac OS X version 10.3 and later**

Returns the rotation angle of a page in a PDF document.

`CGPDFDocumentGetTrimBox` (page 20) **Deprecated in Mac OS X version 10.3 and later**

Returns the trim box of a page in a PDF document.

## Functions

### **CGPDFDocumentAllowsCopying**

Returns whether the specified PDF document allows copying.

```
bool CGPDFDocumentAllowsCopying (
    CGPDFDocumentRef document
);
```

#### **Parameters**

*document*

A PDF document.

#### **Return Value**

A Boolean that, if `true`, indicates that the document allows copying. If the value is `false`, the document does not allow copying.

#### **Discussion**

This function returns `true` if the specified PDF document allows copying. It returns `false` if the document is encrypted and the current password doesn't grant permission to perform copying.

#### **Availability**

Available in Mac OS X version 10.2 and later.

#### **Declared In**

`CGPDFDocument.h`

### **CGPDFDocumentAllowsPrinting**

Returns whether a PDF document allows printing.

```
bool CGPDFDocumentAllowsPrinting (
    CGPDFDocumentRef document
);
```

#### **Parameters**

*document*

A PDF document.

#### **Return Value**

A Boolean that, if `true`, indicates that the document allows printing. If the value is `false`, the document does not allow printing.

#### **Discussion**

This function returns `true` if the specified PDF document allows printing. It returns `false` if the document is encrypted and the current password doesn't grant permission to perform printing.

**Availability**

Available in Mac OS X version 10.2 and later.

**Declared In**

CGPDFDocument.h

**CGPDFDocumentCreateWithProvider**

Creates a Quartz PDF document using a data provider.

```
CGPDFDocumentRef CGPDFDocumentCreateWithProvider (
    CGDataProviderRef provider
);
```

**Parameters**

*provider*

A data provider that supplies the PDF document data.

**Return Value**

A new Quartz PDF document, or NULL if a document can not be created. You are responsible for releasing the object using [CGPDFDocumentRelease](#) (page 13).

**Discussion**

Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.

**Availability**

Available in Mac OS X version 10.0 and later.

**See Also**

CGContextDrawPDFDocument

**Related Sample Code**

CarbonSketch

**Declared In**

CGPDFDocument.h

**CGPDFDocumentCreateWithURL**

Creates a Quartz PDF document using data specified by a URL.

```
CGPDFDocumentRef CGPDFDocumentCreateWithURL (
    CFURLRef url
);
```

**Parameters**

*url*

The URL address at which the PDF document data is located.

**Return Value**

A new Quartz PDF document, or NULL if a document could not be created. You are responsible for releasing the object using [CGPDFDocumentRelease](#) (page 13).

**Discussion**

Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.

**Availability**

Available in Mac OS X version 10.0 and later.

**See Also**

`CGContextDrawPDFDocument`

**Declared In**

`CGPDFDocument.h`

**CGPDFDocumentGetCatalog**

Returns the document catalog of a Quartz PDF document.

```
CGPDFDictionaryRef CGPDFDocumentGetCatalog (
    CGPDFDocumentRef document
);
```

**Parameters**

*document*

A PDF document.

**Return Value**

The document catalog of the specified document.

**Discussion**

The entries in a PDF document catalog recursively describe the contents of the PDF document. You can access the contents of a PDF document catalog by calling the function `CGPDFDocumentGetCatalog`. For information on accessing PDF metadata, see *Quartz 2D Programming Guide*.

**Availability**

Available in Mac OS X version 10.3 and later.

**Declared In**

`CGPDFDocument.h`

**CGPDFDocumentGetID**

Gets the file identifier for a PDF document.

```
CGPDFArrayRef CGPDFDocumentGetID (
    CGPDFDocumentRef document
);
```

**Parameters**

*document*

The document whose file identifier you want to obtain.

**Return Value**

Returns the file identifier for the document.

**Discussion**

A PDF file identifier is defined in the PDF specification as an array of two strings, the first of which is a permanent identifier that doesn't change even when the file is updated. The second string changes each time the file is updated. For more information, see *PDF Reference: Version 1.3 (Second Edition)*, Adobe Systems Incorporated.

**Availability**

Available in Mac OS X v10.4 and later.

**Declared In**

CGPDFDocument.h

**CGPDFDocumentGetInfo**

Gets the information dictionary for a PDF document.

```
CGPDFDictionaryRef CGPDFDocumentGetInfo (
    CGPDFDocumentRef document
);
```

**Parameters**

*document*

The document whose dictionary you want to obtain.

**Return Value**

The information dictionary for the document.

**Availability**

Available in Mac OS X v10.4 and later.

**Declared In**

CGPDFDocument.h

**CGPDFDocumentGetNumberOfPages**

Returns the number of pages in a PDF document.

```
size_t CGPDFDocumentGetNumberOfPages (
    CGPDFDocumentRef document
);
```

**Parameters**

*document*

The PDF document to examine.

**Return Value**

The total number of pages in the PDF document.

**Availability**

Available in Mac OS X version 10.0 and later.

**Declared In**

CGPDFDocument.h

**CGPDFDocumentGetPage**

Returns a page from a Quartz PDF document.

```
CGPDFPageRef CGPDFDocumentGetPage (
    CGPDFDocumentRef document,
    size_t pageNumber
);
```

**Parameters**

*document*

A PDF document.

*pageNumber*

The number of the page requested.

**Return Value**

Return the PDF page corresponding to the specified page number, or `NULL` if no such page exists in the document. Pages are numbered starting at 1.

**Availability**

Available in Mac OS X version 10.3 and later.

**Related Sample Code**

CarbonSketch

**Declared In**

`CGPDFDocument.h`

**CGPDFDocumentGetTypeID**

Returns the type identifier for Quartz PDF documents.

```
CTypeID CGPDFDocumentGetTypeID (
    void
);
```

**Return Value**

The identifier for the opaque type [CGPDFDocumentRef](#) (page 15).

**Availability**

Available in Mac OS X version 10.2 and later.

**Declared In**

`CGPDFDocument.h`

**CGPDFDocumentGetVersion**

Returns the major and minor version numbers of a Quartz PDF document.

```
void CGPDFDocumentGetVersion (
    CGPDFDocumentRef document,
    int *majorVersion,
    int *minorVersion
);
```

**Parameters***document*

A PDF document.

*majorVersion*

On return, contains the major version number of the document.

*minorVersion*

On return, contains the minor version number of the document.

**Return Value**

On return, the values of the *majorVersion* and *minorVersion* parameters are set to the major and minor version numbers of the document respectively.

**Availability**

Available in Mac OS X version 10.3 and later.

**Declared In**

CGPDFDocument.h

**CGPDFDocumentIsEncrypted**

Returns whether the specified PDF file is encrypted.

```
bool CGPDFDocumentIsEncrypted (
    CGPDFDocumentRef document
);
```

**Parameters***document*

A PDF document.

**Return Value**

A Boolean that, if `true`, indicates that the document is encrypted. If the value is `false`, the document is not encrypted.

**Discussion**

If the document is encrypted, a password must be supplied before certain operations are enabled. For more information, see [CGPDFDocumentUnlockWithPassword](#) (page 14).

**Availability**

Available in Mac OS X version 10.2 and later.

**Declared In**

CGPDFDocument.h

**CGPDFDocumentIsUnlocked**

Returns whether the specified PDF document is currently unlocked.

```
bool CGPDFDocumentIsUnlocked (
    CGPDFDocumentRef document
);
```

**Parameters**

*document*

A PDF document.

**Return Value**

A Boolean that, if `true`, indicates that the document is not locked. If the value is `false`, the document is locked.

**Discussion**

There are two possible reasons why a PDF document is unlocked:

- The document is not encrypted.
- The document is encrypted, and a valid password was previously specified using [CGPDFDocumentUnlockWithPassword](#) (page 14).

**Availability**

Available in Mac OS X version 10.2 and later.

**Declared In**

`CGPDFDocument.h`

**CGPDFDocumentRelease**

Decrements the retain count of a PDF document.

```
void CGPDFDocumentRelease (
    CGPDFDocumentRef document
);
```

**Parameters**

*document*

The PDF document to release.

**Discussion**

This function is equivalent to `CFRelease`, except that it does not cause an error if the `document` parameter is `NULL`.

**Availability**

Available in Mac OS X version 10.0 and later.

**Declared In**

`CGPDFDocument.h`

**CGPDFDocumentRetain**

Increments the retain count of a Quartz PDF document.

```
CGPDFDocumentRef CGPDFDocumentRetain (
    CGPDFDocumentRef document
);
```

**Parameters***document*

The PDF document to retain.

**Return Value**The same document you passed in as the *document* parameter.**Discussion**

This function is equivalent to `CFRetain`, except that it does not cause an error if the `document` parameter is `NULL`.

**Availability**

Available in Mac OS X version 10.0 and later.

**Declared In**`CGPDFDocument.h`**CGPDFDocumentUnlockWithPassword**

Unlocks an encrypted PDF document, if a valid password is supplied.

```
bool CGPDFDocumentUnlockWithPassword (
    CGPDFDocumentRef document,
    const char *password
);
```

**Parameters***document*

A PDF document.

*password*

A pointer to a string that contains the password.

**Return Value**

A Boolean that, if `true`, indicates that the document has been successfully unlocked. If the value is `false`, the document has not been unlocked.

**Discussion**

Given an encrypted PDF document and a password, this function does the following:

- Sets the lock state of the document, based on the validity of the password.
- Returns `true` if the document is unlocked.
- Returns `false` if the document cannot be unlocked with the specified password.

Unlocking a PDF document makes it possible to decrypt the document and perform other privileged operations. Different passwords enable different operations.

**Availability**

Available in Mac OS X version 10.2 and later.

**Declared In**

CGPDFDocument.h

## Data Types

**CGPDFDocumentRef**

An opaque type that represents a PDF (Portable Document Format) document.

```
typedef struct CGPDFDocument * CGPDFDocumentRef;
```

**Availability**

Available in Mac OS X v10.0 and later.

**Declared In**

CGPDFDocument.h

# Deprecated CGPDFDocument Functions

---

A function identified as deprecated has been superseded and may become unsupported in the future.

## Deprecated in Mac OS X version 10.3 and later

### CGPDFDocumentGetArtBox

Returns the art box of a page in a PDF document. (Deprecated in Mac OS X version 10.3 and later.)

```
CGRect CGPDFDocumentGetArtBox (
    CGPDFDocumentRef document,
    int page
);
```

#### Parameters

*document*

The PDF document to examine.

*page*

An integer that specifies the number of the page to examine.

#### Return Value

A rectangle that represents the art box for the specified page, expressed in default PDF user space units (points).

#### Discussion

The replacement function for this one is `CGPDFPageGetBoxRect`, which gets the rectangle associated with a type of box (art, media, crop, bleed trim) that represents a content region or page dimensions of a PDF page. For more information see *CGPDFPage Reference*.

The art box defines the extent of the page's meaningful content (including potential white space) as intended by the document creator. The default value is the page's crop box.

#### Availability

Available in Mac OS X version 10.0 and later.

Deprecated in Mac OS X version 10.3 and later.

#### Declared In

`CGPDFDocument.h`

### CGPDFDocumentGetBleedBox

Returns the bleed box of a page in a PDF document. (Deprecated in Mac OS X version 10.3 and later.)

## Deprecated CGPDFDocument Functions

```
CGRect CGPDFDocumentGetBleedBox (
    CGPDFDocumentRef document,
    int page
);
```

**Parameters**

*document*

The PDF document to examine.

*page*

An integer that specifies the number of the page to examine.

**Return Value**

A rectangle that represents the bleed box for the specified page, expressed in default PDF user space units (points).

**Discussion**

The replacement function for this one is `CGPDFPageGetBoxRect`, which gets the rectangle associated with a type of box (art, media, crop, bleed trim) that represents a content region or page dimensions of a PDF page. For more information see *CGPDFPage Reference*.

The bleed box defines the bounds to which the contents of the page should be clipped when output in a production environment. The default value is the page's crop box.

**Availability**

Available in Mac OS X version 10.0 and later.

Deprecated in Mac OS X version 10.3 and later.

**Declared In**

`CGPDFDocument.h`

**CGPDFDocumentGetCropBox**

Returns the crop box of a page in a PDF document. (Deprecated in Mac OS X version 10.3 and later.)

```
CGRect CGPDFDocumentGetCropBox (
    CGPDFDocumentRef document,
    int page
);
```

**Parameters**

*document*

The PDF document to examine.

*page*

An integer that specifies the number of the page to examine.

**Return Value**

A rectangle that represents the crop box for the specified page, expressed in default PDF user space units (points).

**Discussion**

The replacement function for this one is `CGPDFPageGetBoxRect`, which gets the rectangle associated with a type of box (art, media, crop, bleed trim) that represents a content region or page dimensions of a PDF page. For more information see *CGPDFPage Reference*.

## Deprecated CGPDFDocument Functions

The crop box defines the region to which the contents of the page are to be clipped (or cropped) when displayed or printed. Unlike the other boxes, the crop box has no defined meaning in terms of physical page geometry or intended use—it merely suggests where the page should be clipped.

**Availability**

Available in Mac OS X version 10.0 and later.

Deprecated in Mac OS X version 10.3 and later.

**Declared In**

CGPDFDocument.h

**CGPDFDocumentGetMediaBox**

Returns the media box of a page in a PDF document. (Deprecated in Mac OS X version 10.3 and later.)

```
CGRect CGPDFDocumentGetMediaBox (
    CGPDFDocumentRef document,
    int page
);
```

**Parameters**

*document*

The PDF document to examine.

*page*

An integer that specifies the number of the page to examine.

**Return Value**

A rectangle that represents the media box for the specified page, expressed in default PDF user space units (points).

**Discussion**

The replacement function for this one is `CGPDFPageGetBoxRect`, which gets the rectangle associated with a type of box (art, media, crop, bleed trim) that represents a content region or page dimensions of a PDF page. For more information see *CGPDFPage Reference*.

The media box defines the location and size of the physical medium on which the page is intended to be displayed or printed. For example, if the page size is 8.5 by 11 inches, this function returns the coordinate pairs (0,0) and (612,792).

**Availability**

Available in Mac OS X version 10.0 and later.

Deprecated in Mac OS X version 10.3 and later.

**Declared In**

CGPDFDocument.h

**CGPDFDocumentGetRotationAngle**

Returns the rotation angle of a page in a PDF document. (Deprecated in Mac OS X version 10.3 and later.)

## Deprecated CGPDFDocument Functions

```
int CGPDFDocumentGetRotationAngle (
    CGPDFDocumentRef document,
    int page
);
```

**Parameters**

*document*

The PDF document to examine.

*page*

An integer that specifies the number of the page to examine.

**Return Value**

The rotation angle of the page, expressed in degrees. If the specified page does not exist, returns 0.

**Discussion**

The replacement function for this one is `CGPDFPageGetRotationAngle`. For more information see *CGPDFPage Reference*.

**Availability**

Available in Mac OS X version 10.0 and later.

Deprecated in Mac OS X version 10.3 and later.

**Declared In**

`CGPDFDocument.h`

**CGPDFDocumentGetTrimBox**

Returns the trim box of a page in a PDF document. (Deprecated in Mac OS X version 10.3 and later.)

```
CGRect CGPDFDocumentGetTrimBox (
    CGPDFDocumentRef document,
    int page
);
```

**Parameters**

*document*

The PDF document to examine.

*page*

A value specifying the number of the page to examine.

**Return Value**

Returns a rectangle that represents the trim box for the specified page, expressed in default PDF user space units (points).

**Discussion**

The replacement function for this one is `CGPDFPageGetBoxRect`, which gets the rectangle associated with a type of box (art, media, crop, bleed trim) that represents a content region or page dimensions of a PDF page. For more information see *CGPDFPage Reference*.

The trim box defines the intended dimensions of the finished page after trimming. It may be smaller than the media box, to allow for production-related content such as printing instructions, cut marks, or color bars. The default value is the page's crop box.

**Availability**

Available in Mac OS X version 10.0 and later.

Deprecated CGPDFDocument Functions

Deprecated in Mac OS X version 10.3 and later.

**Declared In**

CGPDFDocument.h

# Document Revision History

---

This table describes the changes to *CGPDFDocument Reference*.

Date	Notes
2006-12-22	Added information about using threads.
2005-04-29	Updated for Mac OS X v10.4.
	Added the functions <a href="#">CGPDFDocumentGetInfo</a> (page 10) and <a href="#">CGPDFDocumentGetID</a> (page 9).
2004-08-31	Added introductory material, additional information about deprecated functions, and cross references to conceptual documentation.
2004-02-26	First version of this document. An earlier version of this information appeared in <i>Quartz 2D Reference</i> .
