# NSToolTipOwner Protocol Reference

(informal protocol)

---

<b>Framework</b>	/System/Library/Frameworks/AppKit.framework
<b>Companion guide</b>	Online Help
<b>Declared in</b>	NSView.h

## Overview

The NSToolTipOwner informal protocol declares a method that allows an object to dynamically provide the text to a tool tip. If the tool tip object does not implement this method, the NSObject protocol *description* method is invoked instead.

## Tasks

### Obtaining Tool Tip Strings

- [view:stringForToolTip:point:userData:](#) (page 5)

Returns the tool tip string to be displayed due to the cursor pausing at location *point* within the tool tip rectangle identified by *tag* in the view *view*.

## Instance Methods

### **view:stringForToolTip:point:userData:**

Returns the tool tip string to be displayed due to the cursor pausing at location *point* within the tool tip rectangle identified by *tag* in the view *view*.

```
- (NSString *)view:(NSView *)view stringForToolTip:(NSToolTipTag)tag  
point:(NSPoint)point userData:(void *)userData
```

#### **Discussion**

*userData* is additional information provided by the creator of the tool tip rectangle.

#### **Availability**

Available in Mac OS X v10.0 and later.

**See Also**

– addToolTipRect:owner:userData: (NSView)

**Declared In**
