## CFCharacterSet Reference

**Derived From:** CFType

Framework: CoreFoundation/CoreFoundation.h

**Companion guide** Strings Programming Guide for Core Foundation

**Declared in** CFCharacterSet.h

## Overview

A CFCharacterSet object represents a set of Unicode compliant characters. CFString uses CFCharacterSet objects to group characters together for searching operations, so that they can find any of a particular set of characters during a search. The two opaque types, CFCharacterSet and CFMutableCharacterSet, define the interface for static and dynamic character sets, respectively. The objects you create using these opaque types are referred to as character set objects (and when no confusion will result, merely as character sets).

CFCharacterSet's principal function, CFCharacterSetIsCharacterMember (page 11), provides the basis for all other functions in its interface. You create a character set using one of the CFCharacterSetCreate... functions. You may also use any one of the predefined character sets using the CFCharacterSetGetPredefined (page 10) function.

CFCharacterSet is "toll-free bridged" with its Cocoa Foundation counterpart, NSCharacterSet. This means that the Core Foundation type is interchangeable in function or method calls with the bridged Foundation object. Therefore, in a method where you see an NSCharacterSet \* parameter, you can pass in a CFCharacterSetRef, and in a function where you see a CFCharacterSetRef parameter, you can pass in an NSCharacterSet instance. This capability also applies to concrete subclasses of NSCharacterSet. See Interchangeable Data Types for more information on toll-free bridging.

## Functions by Task

## **Creating Character Sets**

CFCharacterSetCreateCopy (page 7)

Creates a new character set with the values from a given character set.

CFCharacterSetCreateInvertedSet (page 7)

Creates a new immutable character set that is the invert of the specified character set.

CFCharacterSetCreateWithCharactersInRange (page 9)

Creates a new character set with the values from the given range of Unicode characters.

Overview 2006-12-01 | © 2003, 2006 Apple Computer, Inc. All Rights Reserved. CFCharacterSetCreateWithCharactersInString (page 9)

Creates a new character set with the values in the given string.

CFCharacterSetCreateWithBitmapRepresentation (page 8)

Creates a new immutable character set with the bitmap representation specified by given data.

## **Getting Predefined Character Sets**

CFCharacterSetGetPredefined (page 10)

Returns a predefined character set.

## **Querying Character Sets**

CFCharacterSetCreateBitmapRepresentation (page 6)

Creates a new immutable data with the bitmap representation from the given character set.

CFCharacterSetHasMemberInPlane (page 10)

Reports whether or not a character set contains at least one member character in the specified plane.

CFCharacterSetIsCharacterMember (page 11)

Reports whether or not a given Unicode character is in a character set.

CFCharacterSetIsLongCharacterMember (page 11)

Reports whether or not a given UTF-32 character is in a character set.

CFCharacterSetIsSupersetOfSet (page 12)

Reports whether or not a character set is a superset of another set.

## **Getting the Character Set Type Identifier**

CFCharacterSetGetTypeID (page 10)

Returns the type identifier of the CFCharacterSet opaque type.

## **Functions**

#### **CFCharacterSetCreateBitmapRepresentation**

Creates a new immutable data with the bitmap representation from the given character set.

```
CFDataRef CFCharacterSetCreateBitmapRepresentation (
    CFAllocatorRef alloc,
    CFCharacterSetRef theSet
);
```

#### **Parameters**

alloc

The allocator to use to allocate memory for the new object. Pass NULL or kCFAllocatorDefault to use the current default allocator.

theSet

The set from which to create a bitmap representation. Refer to the comments for CFCharacterSetCreateWithBitmapRepresentation (page 8) for the detailed discussion of the bitmap representation format.

#### **Return Value**

A new CFData object containing a bitmap representation of theSet. Ownership follows the Create Rule.

#### **Availability**

Available in CarbonLib v1.0 and later.

Available in Mac OS X v10.0 and later.

#### **Declared In**

CFCharacterSet.h

### CFCharacterSetCreateCopy

Creates a new character set with the values from a given character set.

```
CFCharacterSetRef CFCharacterSetCreateCopy (
    CFAllocatorRef alloc,
    CFCharacterSetRef theSet
);
```

#### **Parameters**

a11oc

The allocator to use to allocate memory for the new object. Pass NULL or kCFAllocatorDefault to use the current default allocator.

theSet

The character set to copy.

#### **Return Value**

A new character set that is a copy of the Set. Ownership follows the Create Rule.

#### Discussion

This function tries to compact the backing store where applicable.

#### **Availability**

Available in Mac OS X v10.3 and later.

#### **Declared In**

CFCharacterSet.h

#### **CFCharacterSetCreateInvertedSet**

Creates a new immutable character set that is the invert of the specified character set.

Functions

7

```
CFCharacterSetRef CFCharacterSetCreateInvertedSet (
    CFAllocatorRef alloc,
    CFCharacterSetRef theSet
);
```

#### **Parameters**

a110c

The allocator to use to allocate memory for the new object. Pass NULL or kCFAllocatorDefault to use the current default allocator.

theSet

The character set from which to create an inverted set.

#### Return Value

A new character set that is the invert of the Set. Ownership follows the Create Rule.

#### **Availability**

Available in Mac OS X v10.2 and later.

#### Declared In

CFCharacterSet.h

### CFC haracter Set Create With Bit map Representation

Creates a new immutable character set with the bitmap representation specified by given data.

```
CFCharacterSetRef CFCharacterSetCreateWithBitmapRepresentation (
    CFAllocatorRef alloc,
    CFDataRef theData
):
```

#### **Parameters**

a11oc

The allocator to use to allocate memory for the new object. Pass NULL or kCFAllocatorDefault to use the current default allocator.

theData

A CFData object that specifies the bitmap representation of the Unicode character points the for the new character set. The bitmap representation could contain all the Unicode character range starting from BMP to Plane 16. The first 8KiB (8192 bytes) of the data represent the BMP range. The BMP range 8KiB can be followed by zero to sixteen 8KiB bitmaps, each prepended with the plane index byte. For example, the bitmap representing the BMP and Plane 2 has the size of 16385 bytes (8KiB for BMP, 1 byte index, and a 8KiB bitmap for Plane 2). The plane index byte, in this case, contains the integer value two.

If the data contains a Plane index byte outside of the valid Plane range (1 to 16), the behavior is undefined.

#### **Return Value**

A new character set containing the indicated characters from theData. Ownership follows the Create Rule.

#### **Availability**

Available in CarbonLib v1.0 and later.

Available in Mac OS X v10.0 and later.

#### **Declared In**

CFCharacterSet.h

#### **CFCharacterSetCreateWithCharactersInRange**

Creates a new character set with the values from the given range of Unicode characters.

```
CFCharacterSetRef CFCharacterSetCreateWithCharactersInRange (
  CFAllocatorRef alloc,
   CFRange theRange
);
```

#### **Parameters**

alloc

The allocator to use to allocate memory for the new object. Pass NULL or kCFAllocatorDefault to use the current default allocator.

theRange

The Unicode range of characters of the new character set. The function accepts the range in 32-bit in the UTF-32 format. The valid character point range is from 0x00000 to 0x10FFFF.

#### **Return Value**

A new character set that contains a contiguous range of Unicode characters. Ownership follows the Create Rule.

#### **Availability**

Available in CarbonLib v1.0 and later.

Available in Mac OS X v10.0 and later.

#### Declared In

CFCharacterSet.h

#### CFCharacterSetCreateWithCharactersInString

Creates a new character set with the values in the given string.

```
CFCharacterSetRef CFCharacterSetCreateWithCharactersInString (
  CFAllocatorRef alloc,
   CFStringRef theString
);
```

#### **Parameters**

a11oc

The allocator to use to allocate memory for the new object. Pass NULL or kCFAllocatorDefault to use the current default allocator.

theString

A string containing the characters for the new set.

#### **Return Value**

A new character set containing the characters from the String. Ownership follows the Create Rule.

#### **Availability**

Available in CarbonLib v1.0 and later.

Available in Mac OS X v10.0 and later.

#### Declared In

CFCharacterSet.h

#### **CFCharacterSetGetPredefined**

Returns a predefined character set.

#### **Parameters**

the Set Identifier

A predefined character set. See "Predefined CFCharacterSet Selector Values" (page 13) for the list of available character sets.

#### Return Value

A predefined character set. This instance is owned by Core Foundation.

#### **Availability**

Available in CarbonLib v1.0 and later.

Available in Mac OS X v10.0 and later.

#### **Declared In**

CFCharacterSet.h

### CFCharacterSetGetTypeID

Returns the type identifier of the CFCharacterSet opaque type.

```
CFTypeID CFCharacterSetGetTypeID (
    void
);
```

#### **Return Value**

The type identifier of the CFCharacterSet opaque type.

#### Discussion

CFMutableCharacterSet objects have the same type identifier as CFCharacterSet objects.

#### **Availability**

Available in CarbonLib v1.0 and later.

Available in Mac OS X v10.0 and later.

#### **Declared In**

CFCharacterSet.h

#### **CFCharacterSetHasMemberInPlane**

Reports whether or not a character set contains at least one member character in the specified plane.

```
Boolean CFCharacterSetHasMemberInPlane (
    CFCharacterSetRef theSet,
    CFIndex thePlane
);
```

#### **Parameters**

theSet

The character set to examine.

thePlane

The plane number to be checked for the membership. The valid value range is from 0 to 16. If the value is outside of the valid plane number range, the behavior is undefined.

#### Return Value

true if at least one member character is in the specified plane, otherwise false.

#### **Availability**

Available in Mac OS X v10.2 and later.

#### Declared In

CFCharacterSet.h

#### **CFCharacterSetIsCharacterMember**

Reports whether or not a given Unicode character is in a character set.

```
Boolean CFCharacterSetIsCharacterMember (
    CFCharacterSetRef theSet,
    UniChar theChar
):
```

#### **Parameters**

theSet

The character set to examine.

theChar

The Unicode character for which to test against the character set. Note that this function takes 16-bit Unicode character value; hence, it does not support access to the non-BMP planes.

11

#### Return Value

true if the Set contains the Char, otherwise false.

#### **Availability**

Available in CarbonLib v1.0 and later.

Available in Mac OS X v10.0 and later.

#### Declared In

CFCharacterSet.h

#### **CFCharacterSetIsLongCharacterMember**

Reports whether or not a given UTF-32 character is in a character set.

-unctions

```
Boolean CFCharacterSetIsLongCharacterMember (
    CFCharacterSetRef theSet,
    UTF32Char theChar
);
```

#### **Parameters**

theSet

The character set to examine.

theChar

The UTF-32 character for which to test against the character set.

#### **Return Value**

true if the Set contains the Char, otherwise false.

#### **Availability**

Available in Mac OS X v10.2 and later.

#### Declared In

CFCharacterSet.h

### CFC haracter Set Is Superset Of Set

Reports whether or not a character set is a superset of another set.

```
Boolean CFCharacterSetIsSupersetOfSet (
    CFCharacterSetRef theSet,
    CFCharacterSetRef theOtherset
);
```

#### **Parameters**

theSet

The character set to be checked for the membership of the 0 the rSet.

theOtherSet

The character set to be checked whether or not it is a subset of the Set.

#### Return Value

true if the Set is a superset of the Other Set, otherwise false.

#### **Availability**

Available in Mac OS X v10.2 and later.

#### **Declared In**

CFCharacterSet.h

## **Data Types**

#### **CFCharacterSetPredefinedSet**

Defines a predefined character set.

typedef CFIndex CFCharacterSetPredefinedSet;

#### Discussion

See "Predefined CFCharacterSet Selector Values" (page 13) for values.

#### **Availability**

Available in Mac OS X v10.0 and later.

#### **Declared In**

CFCharacterSet.h

#### CFCharacterSetRef

A reference to an immutable character set object.

typedef const struct \_\_CFCharacterSet \*CFCharacterSetRef;

#### **Availability**

Available in Mac OS X v10.0 and later.

#### **Declared In**

CFCharacterSet.h

## **Constants**

## **Predefined CFCharacterSet Selector Values**

Identifiers for the available predefined CFCharacterSet objects.

Constants 13

```
enum {
    kCFCharacterSetControl = 1,
    kCFCharacterSetWhitespace,
    kCFCharacterSetWhitespaceAndNewline,
    kCFCharacterSetDecimalDigit,
    kCFCharacterSetLetter.
    kCFCharacterSetLowercaseLetter,
    kCFCharacterSetUppercaseLetter,
    kCFCharacterSetNonBase,
    kCFCharacterSetDecomposable,
    kCFCharacterSetAlphaNumeric,
    kCFCharacterSetPunctuation,
    kCFCharacterSetCapitalizedLetter = 13,
    kCFCharacterSetSymbol = 14,
    kCFCharacterSetNewline = 15,
    kCFCharacterSetIllegal = 12
};
Constants
kCFCharacterSetControl
      Control character set (Unicode General Category Cc and Cf).
      Available in Mac OS X v10.0 and later.
      Declared in CFCharacterSet.h.
kCFCharacterSetWhitespace
      Whitespace character set (Unicode General Category Zs and U0009 CHARACTER TABULATION).
      Available in Mac OS X v10.0 and later.
      Declared in CFCharacterSet.h.
kCFCharacterSetWhitespaceAndNewline
      Whitespace and Newline character set (Unicode General Category Z*, U000A ~ U000D, and U0085).
      Available in Mac OS X v10.0 and later.
      Declared in CFCharacterSet.h.
kCFCharacterSetDecimalDigit
      Decimal digit character set.
      Available in Mac OS X v10.0 and later.
      Declared in CFCharacterSet.h.
kCFCharacterSetLetter
      Letter character set (Unicode General Category L* & M*).
      Available in Mac OS X v10.0 and later.
      Declared in CFCharacterSet.h.
kCFCharacterSetLowercaseLetter
      Lowercase character set (Unicode General Category LI).
      Available in Mac OS X v10.0 and later.
      Declared in CFCharacterSet.h.
kCFCharacterSetUppercaseLetter
      Uppercase character set (Unicode General Category Lu and Lt).
      Available in Mac OS X v10.0 and later.
      Declared in CFCharacterSet.h.
```

#### kCFCharacterSetNonBase

Non-base character set (Unicode General Category M\*).

Available in Mac OS X v10.0 and later.

Declared in CFCharacterSet.h.

#### kCFCharacterSetDecomposable

Canonically decomposable character set.

Available in Mac OS X v10.0 and later.

Declared in CFCharacterSet.h.

#### kCFCharacterSetAlphaNumeric

Alpha Numeric character set (Unicode General Category L\*, M\*, & N\*).

Available in Mac OS X v10.0 and later.

Declared in CFCharacterSet.h.

#### kCFCharacterSetPunctuation

Punctuation character set (Unicode General Category P\*).

Available in Mac OS X v10.0 and later.

Declared in CFCharacterSet.h.

#### kCFCharacterSetCapitalizedLetter

Titlecase character set (Unicode General Category Lt).

Available in Mac OS X v10.2 and later.

Declared in CFCharacterSet.h.

#### kCFCharacterSetSymbol

Symbol character set (Unicode General Category S\*).

Available in Mac OS X v10.3 and later.

Declared in CFCharacterSet.h.

#### kCFCharacterSetNewline

Newline character set (U000A ~ U000D, U0085, U2028, and U2029).

Available in Mac OS X v10.5 and later.

Declared in CFCharacterSet.h.

#### kCFCharacterSetIllegal

Illegal character set.

Available in Mac OS X v10.0 and later.

Declared in CFCharacterSet.h.

#### Discussion

Use these constants with the CFCharacterSetGetPredefined (page 10) function to get one of the predefined character sets.

#### **Declared In**

CFCharacterSet.h

Constants 15

# **Document Revision History**

This table describes the changes to CFCharacterSet Reference.

Date	Notes
2006-12-01	Updated definitions of character sets to include Unicode categories.
2006-04-04	Updated to include new API in Mac OS X v10.5.
	Removed Unicode version number from introduction.
2005-12-06	Corrected links to companion documents.
2005-08-11	Corrected minor typographical errors.
2003-08-01	Added descriptions of new constant and new create-copy method.
2003-01-01	First version of this document.

#### **REVISION HISTORY**

**Document Revision History**
