AppleTalk Transaction Protocol (ATP)

Contents

```
About ATP
               6-3
  The ATP Packet Format
                             6-5
  At-Least-Once and Exactly-Once Transactions
                                                  6-7
  The Buffer Data Structure
  ATP Flags
                6-8
              6-9
Using ATP
  Writing a Requester ATP Application
                                          6-9
    Creating a Buffer Data Structure
                                       6-12
    Specifying the Parameters for the Send Request Function
                                                               6-12
  Writing a Responder ATP Application
                                           6-14
    Opening and Setting Up a Socket to Receive Requests
                                                            6-14
    Responding to Requests
                                6-16
  Canceling an ATP Function
                                6-19
ATP Reference
                  6-20
  Data Structures
                     6 - 20
    The Buffer Data Structure
                                 6-20
    The ATP Parameter Block
                                 6-21
    The Address Block Record
                                  6-23
  Routines
               6-23
                                6-24
    Sending an ATP Request
    Opening and Closing an ATP Socket
    Setting Up a Socket to Listen for Requests
                                                6-32
    Responding to Requests
    Canceling Pending ATP Functions
                                         6-38
    Building a Buffer Data Structure
                                       6-44
Summary of ATP
                     6-46
  Pascal Summary
                      6-46
